4x4 gauze pads

5x9 ABD pads (absorbing)

4 rolls paper tape

Steri-strips

Celox, 4 packages (blood clotting powder)

burn gel

alcohol pads

Benadryl

ZipLock bags

## CHOKING?

It is scary to choke on food while out on the water. Basic Life Support includes performing the Heimlich Maneuver, but not everyone is strong enough to do it. We have an optional alternative called the LifeVac on board, stored under the helm seat.

According to the manufacturer, “The LifeVac is a non-powered, non-invasive, single-use-only airway clearance device developed for resuscitating a victim with an airway obstruction when current choking protocols have been followed without success. LifeVac has a one-way valve that does not allow any air to enter a choking victim on the downward motion. The duration of the suction is minimal which makes LifeVac safe and effective. LifeVac is easy to use in an obstructed airway emergency.”

The following instructions are included in the pouch.

The poster is titled "LIFEVAC INSTRUCTIONS FOR USE" and features a red banner that reads "FOLLOW CURRENT CHOKING PROTOCOL AND DIAL 911". It contains six numbered steps with corresponding photographs:

- 1** Insert mask into the unit with a firm twisting motion while applying pressure. Make sure that you check mask to ensure it's attached to the unit. The stem of the mask DOES NOT need to be completely inserted into the unit.
- 2** Place mask over nose and mouth, holding chin upwards. MASK MUST BE HELD FIRMLY OVER NOSE AND MOUTH WITH HAND.
- 3** Holding mask in place with one hand and chin held upwards, push handle down with other hand to compress unit.
- 4** Once handle is depressed, pull handle upward with a short, SWIFT tug while holding mask firmly in place.
- 5** Roll person on side and sweep the mouth to clear any debris. Also check unit for debris. Repeat steps as necessary. If LifeVac is used refer to the Information Page Literature (Indications For Use) section for additional action.

A red warning box at the bottom states: **! IF NO SPONTANEOUS RESPIRATION IS NOTED, THEN RETURN TO CURRENT CHOKING PROTOCOL AND START CPR.**

This is a very helpful training video that is worth five minute of your time. <https://lifevac.net/training/>  
We hope you don't ever have to use it, but it is a useful tool if needed.
